

Setting Up a DirectX Application

By SeyedMorteza Mostajabodaveh

This project is really simple. It will generate a blank window. But what I am looking for to focus here is documenting what happens in the code using DOxygen.

By looking at the code, we can understand that it is commented in a manner which doxygen can understand it and generate the document for the code.

Libraries that is used in this project:

- DirectX SDK

Packages used in this project:

- Visual Studio
- DirectX SDK
- DOxygen

Files:

SettingUpDXApp_Executable	Contains an executable Version of project.
SettingUpDXApp_Solution	Contains the codes of the project. To build and run the solution, you need Visual Studio 2008.
SettingUpDXApp_Doc.rar	Contains the HTML format of documentation that is generated by DOxygen.
DOxygen_Test.zip	Contains a solution that is created just for testing the whole commands that is supported by DOxygen. The generated document is included in the solution folder.
